

## Project scope

Name:	Dillan Zurowski
Community & UN SDG(s):	Content sharing Orientated community - Responsible Consumption and Production(12)
Date:	10/8/2023

<b>Project Name</b>	CommuniTrade
<b>Project Deliverables</b>	
Sign-In/up	<ul style="list-style-type: none"> <li>User runs the app and sees a sign-in page.</li> <li>if a user has an account, they will sign in, otherwise sign up</li> <li>The user will then have access to any previous posts that they have made and notification about potential users interested in their deals.</li> </ul>
Posts page	<ul style="list-style-type: none"> <li>This page will show a list of posts made by other users. The posts will show firstly what is being traded by that user, and second what they wish to get in return.</li> <li>This page will have the ability to scroll through the page, filter by the posts give and take requirements, and allow the user to select the accounts of those making the post.</li> </ul>
User Profile page	<ul style="list-style-type: none"> <li>When a user selects the profile of another user, they should be able to see all of their posts as well as how many trades they have completed in the past to ensure validity.</li> <li>There could then be a way to communicate with the user about one of their posts(discuss with tim about communication methods being in scope or not)</li> </ul>
Trade Offer	<ul style="list-style-type: none"> <li>Each post will include the item the user wants to 'get rid of' and the item(s) they wish to get in return.</li> </ul>
Make posts	<ul style="list-style-type: none"> <li>When making a new post, the user should be able to add a picture of an item they wish to trade for, then state what they wish to get in return for the trade. This could be a specific item, nothing(free), or an open trade (anything).</li> <li>Once posting the item, the opening page should show a list of posts that match what the user selected as their return item. This makes the search process easier. There may be an easier way to suggest posts then a new page but this is the idea for now.</li> </ul>
<b>Project Exclusions</b>	
<ul style="list-style-type: none"> <li>There will not be any moderation methods or way to validate that the description and tags match what the user is trading.</li> <li>There may not be a working communication server but the page could be imitated for the purpose of this project.</li> </ul>
